

# **FOR YOUR INFORMATION**

## **CHICKENPOX**

Several children have been infected with chickenpox. The chickenpox rash is made up of many red blisters, which burst & then scab over. People are infectious until the last blister crusts, so children with chickenpox should be kept away from school during this period.

**Pregnant Women:** Chickenpox can affect pregnancy if the woman has not already had the infection. Please contact your Doctor/Midwife for information.
